

LABORATORY REPORT

Sample:	Sample	Analysis:	M ² AS scans (u+d)	Protocol:	sr-22-b
Customer:	Customer	Measured on:	2022-09-15	Date:	2022-10-16
Order number:	22_XYZ_SR_001	Operator:	ff	Report by:	jw

Methodology

The Mass & Mobility Aerosol Spectrometer (M²AS) measures jointly the particle mass (m) and electric mobility diameter (d). Based on these parameters the effective density (ρ) is calculated as $\rho=(6m)/(\pi d^3)$. The material characteristic density interval (= fingerprint) represents the center 50% of the material's mass weighted lognormal fit.

Fingerprint

Quartiles

Quartile	Q ₂₅	Q ₅₀	Q ₇₅
Effective density / g·cm ⁻³	0.326	0.245	0.184
Mass / fg	86.53	276.3	882.4
Diameter / nm	795.3	1288	2087

Mass-diameter correlation ($m = \kappa \cdot d^\delta$)

Pre-factor κ	9.01e-06
Fractal index δ	2.407

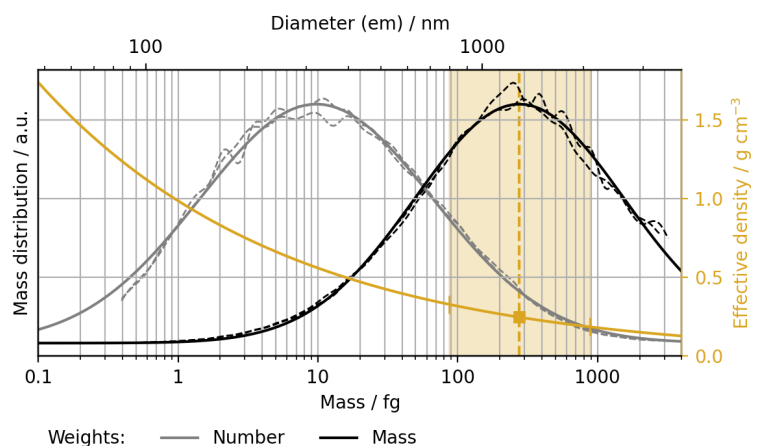

Mass distribution details

Mass distribution parameters:

Weights	Number	Mass
μ	9.753	276.270
σ	1.911	1.720
R^2	0.995	0.996

For a mass distribution of form $1/(\sigma\sqrt{2\pi}) \cdot \exp(-(\ln(m/\mu))/\sigma)^2/2)$
